

PLAY REANDA

Acquisition / One-pager Deck

● LIVE-SERVICE BROWSER MMO

Next-gen browser MMO built for scaling

Real-time multiplayer. Instant access. No download. Mobile-ready. Server-authoritative core. Competitive minigames + missions + social systems.

No download / instant play

Server-authoritative anti-cheat by design

Stripe + VIP monetization ready

Live loops daily/weekly missions

Low ops Node + SQLite

● ONE-LINER

PLAY REANDA is a real-time browser MMO platform where players explore an isometric world, join live minigames, complete recurring missions and upgrade through a native economy.

Designed to feel like a modern gaming startup: fast to enter, hard to put down.

GAMEPLAY HERO

Cinematic in-world capture (HUD minimal) • or a minigame moment with rewards.

A live-service platform, not “just a prototype”

A modern browser MMO designed around speed-to-play and repeatable loops. Built to be expanded with new maps, missions, minigames and cosmetics without rewriting the core.

AT A GLANCE

Real-time multiplayer via Socket.IO (authoritative server rules)

Isometric world + social layer (chat, emotes, friends)

Recurring missions (daily / weekly) + timed events

Competitive minigames integrated into the world flow

Monetization: Stripe Checkout + VIP subscription

No install

ZERO FRICTION ENTRY

Mobile ready

TOUCH CONTROLS

Deploy proven

VERCEL + PM2

Retention is built-in. Monetization is native.

PLAY REANDA doesn't rely on a single mechanic. It's a system of loops that keeps players coming back: missions, progression, events, competition and status.

● RETENTION ENGINE

Daily/weekly missions with measurable progress

XP & levels that unlock caps/benefits

Timed minigames = competition + rewards

Collections & cosmetics = status layer

● MONETIZATION READY

Stripe packs (wallet currency)

VIP subscription (QoL + progression)

Extensible store for bundles & cosmetics

Webhook safety (idempotent crediting)

● LOW OPS LEVERAGE

Node + SQLite = low operational cost

Simple deploy (Vercel + PM2)

Backups & tests already in the workflow

Content-first scaling vs infra-first

Flywheel

Visit • Play • Reward • Upgrade • Return • Share

INSERT KPI TILES HERE

D1/D7 retention • conversion • VIP attach rate

Exploration • competition economy • social (integrated)

This is a live-service "stack": world navigation, minigames, progression, economy and social features are already wired together.

● ISOMETRIC WORLD

Multiple areas + portals & transitions

Authoritative movement (validated steps)

Immersive UX overlays & cinematic layer

● MINIGAMES + EVENTS

Competitive live modes (scheduled)

Rewards integrated into progression

Drop-in sessions inside the same universe

● ECONOMY + SOCIAL

Wallet + shop + market layer

Professions + resources

Chat, emotes, friends (community scaling)

Designed to feel game-native, not aggressive

Monetization aligns with progression and status. Players can enjoy the core experience, while VIP and packs accelerate and personalize the journey.

● MONETIZATION PRIMITIVES

Stripe Checkout for wallet packs

VIP subscription for QoL + progression boosts

Cosmetics as a status and identity layer

Safe crediting via idempotent webhooks

● RETENTION PRIMITIVES

Daily/weekly missions (clear goals, measurable progress)

Timed events to create urgency & community peaks

Progression that unlocks caps & benefits

The hard-to-copy part: authoritative real-time + ops discipline

A production-minded architecture designed to protect integrity and keep iteration fast. This reduces risk for scaling and acquisition.

● TECHNICAL MOAT

Server-authoritative movement & rules (anti-cheat by design)

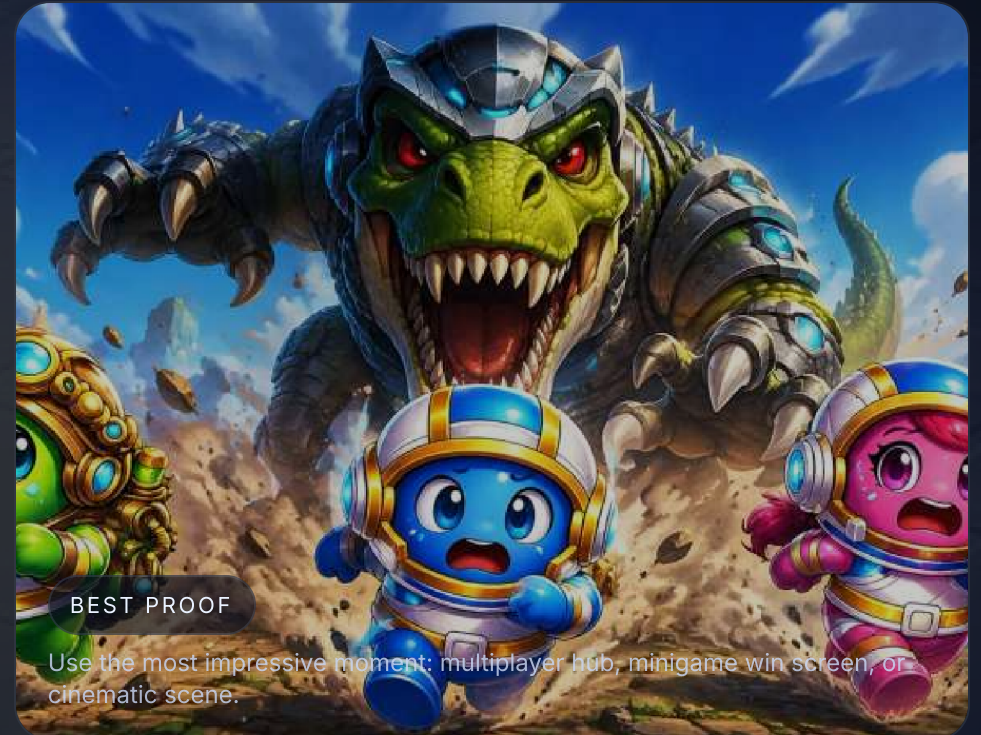

Secure operations (JWT, CORS, hardening headers, secrets fail-fast)

Payments reliability (Stripe signature + idempotent processing)

Operational backbone (backup/restore verification, test suite, admin tooling)

Acquisition path

Live demo • KPIs • full technical due diligence pack

BEST PROOF

Use the most impressive moment: multiplayer hub, minigame win screen, or cinematic scene.
